

TPR UniLock® Retrofit

INCREASE PRODUCTIVITY

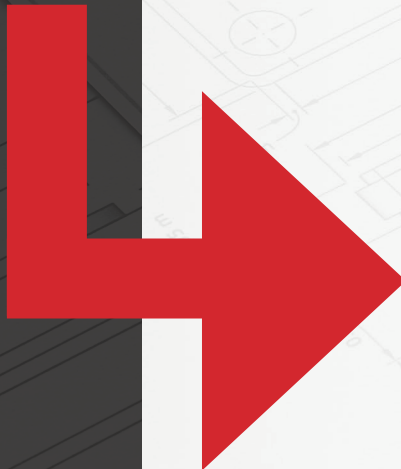

Don't waste time reversing trucks to release RIG Wedge pressure. Upgrade a TPR to the UniLock and have an advanced cam design that automatically releases RIG Wedge. Save time and increase efficiency.

INCREASE SAFETY

When servicing trailers with obstructed Rear Impact Guards, such as intermodal trailers with cover plates, upgrade to the UniLock to ensure a secure engagement is always maintained utilizing the new internal safety mechanism that locks the hook in place.

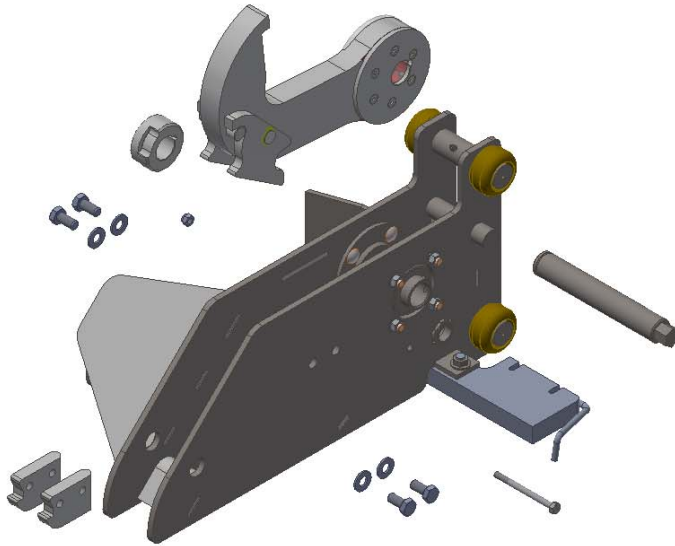

Upgrade
an Existing TPR®
to the **NEW UniLock®**

TPR UniLock® Retrofit

BEFORE SEPTEMBER 2017

Kit Includes
UniLock Carriage (fully assembled)
UniLock Hook (fully assembled)
Timer Control (control box part)
Timer Socket

SEPTEMBER 2017 AND AFTER

Kit Includes
UniLock Hook (partially assembled)
Hardware and Hook Components
Timer Control (control box part)

TPR UniLock Retrofit Kits require disassembly of existing TPR units and the installation of all necessary components in the kits above. Retrofit kits for original TPR units purchased after September, 2017 cannot be used with TPR units purchased prior to September, 2017. Please contact a DLM representative for TPR units purchased in September, 2017. Decals are provided with each retrofit kit and are of the installer's responsibility to apply each decal after installation is complete.
